I don't know if those links are safe or not but just in case if you use GitHub, you can always check out all the users and their projects. And it is easy to find specific information about a user/project by using the information available on the GitHub website and various other search engines. You can also comment and ask questions. Once you have finished reading the documentation on the project you want to learn more about, there is a lot of information on different questions you may have on the project. Good luck!

Q: Turning off the "Use the shell prompt for Tasks" policy (Excel VBA) Is there a way to turn off the "Use the shell prompt for Tasks" policy in Excel, so that VBA doesn't require using the shell prompt? I want to develop macros in VBA and I don't want to use the shell prompt in order to open up the VBA development environment. I know that I can use Excel's VBA editor to create VBA code without the shell prompt being required, but this way I can't change or edit any VBA code that is already created with the shell prompt. I have found lots of references to a ".bas" file with the name being followed by "FullTrust". This suggests that I could modify the contents of this file to add some mechanism to turn off this policy. But I don't know which file is meant to be edited, and how to determine what it contains. Is this possible?

A: A solution that worked for me was to remove and reinstall the 32-bit version of Excel. This means deleting the existing 32-bit version and then replacing it with the 64-bit version (I assume you have it already installed). It seems that the shell prompt policy was changed between 32-bit and 64-bit versions of Excel.

Editing an audio recording There is a way to edit an audio recording using some professional software? I.e. adding/subtracting/removing sections, adding/removing frequencies and so on. I'm not referring to basic editing, such as trimming sections. I have heard that some web services exist and that I could submit a recording and it will be processed. There is an open source software called Audacity which can be found here: It is 82157476af
